Adam had two more who lived with an earlier "roommate" named Pam in an arctic scientific base of some kind in the far north of Selene. Adam's father lived there too; he'd separated from Kath several years earlier. Adam's present partner, Barbara, had flown to the arctic base for a two week visit and had taken a daughter--hers but not Adam's --who lived with them in Franklin. Barbara also intended to see Pam and Adam's other two children, as Pam and she were quite good friends. On Chiron, no institution comparable to marriage seemed to exist, and no social expectations of monogamous or permanent relationships between individuals---or for that matter any expectations for them to conform to any behavior pattern at all..front of her mother or Preston Maddoc. Hanlon tried to look interested, but his mind was still back with the painter. After a few seconds he looked at Colman. "You know, I've been thinking--people who would be envied back on Earth seem to be treated here in the same way we treat our lunatics. Do you think we're all crazy to the Chironians?".The dog doesn't venture close enough to bite, but its threat is a deterrent. "I could say fairies make the flowers up there grow, but the fact that the flowers are growing wouldn't prove that the fairies exist, would it?". "Okay, then what about human beings crossed with puppy dogs?".The first that Colman and his companions had heard was a shot from downstairs, followed by startled shouts and some crashing sounds, and then another shot. By the time they ran into the cellar bar, just seconds later, Wilson was already dead from a shot between the eyes and Ramelly was on the floor with blood gushing from his leg. Padawski and the others were standing uncertainly by the bar, covered by a .38 automatic that one of the young Chironian women was holding. Several other weapons had appeared around the room. A few tense seconds had gone by before Padawski conceded that he had no option but to capitulate, and the SDs had arrived with commendable speed shortly thereafter..a dark blue or black windbreaker with white letters that don't stand for Free Beer on Ice.. "It looked as if it was learning the trade," Colman said..either adventure or a share of the juice..new friend and a night of adventure..Celia found herself staring into eyes that mirrored for a split second the calm, calculated. ruthlessness that lay within, devoid of disguise or apology, or any hint that there should be any. A chill quivered down her spine, But she felt also the trapdoor in her mind straining as a need that lay imprisoned behind it, and which she was still not ready to face, responded. Stern's eyes were challenging her to deny anything that he had said. She was unable to make even that gesture..Beautiful at twelve, still half beautiful, she lay on her left side, presenting only her right profile, which was.Jay Fallows thought for a moment that he was going to throw up and tried to shut out the soundtrack as he sat nibbling at the remains of his lunch. An astronomy book lay propped open on the table in front of him. Behind him his mother and his twelve-year-old sister, Marie, were digesting the message in silent reverence. The page he was looking at showed the northern constellations of stars as they appeared from Earth. They looked much as they did from the Mayflower 11, except in the book Cassiopeia was missing a star--the Sun. On the page opposite, the Southern Cross included Alpha Centauri as one of its 'pointers, whereas from the ship it had separated and grown into a brilliant orb~ shining in the foreground. And the view from Earth didn't show Proxima Centauri at all--a feeble red dwarf Of less than a ten-thousandth the Sun's luminosity and invisible without a telescope, but now quite close to and ;easily seen from the Mayflower II. Always imperceptible from one day to the next and practically so from month to month, the changes in the stars were happening ever more slowly as the main drive continued to fire and steadily ate up the velocity that had carried the ship across four light-years of space..Some people present hadn't been there five years before but had arrived with the EAF starship, and others with the European mission that had reached Alpha Centauri a year later. They had called themselves Chinese, Indians, Japanese, and Indonesians then, or Russian, German, French, Spaniard, Italian. . . but now they were all simply Chironians. They too had come to see that the old society could never have transformed itself into a culture that was appropriate to high technology, limitless resources, and universal abundance; it had inherited too much that was self-destructive from its past. The new society, could only have risen in the way that it had--isolated by light-years of space and by its unique beginnings from the mechanisms that had perpetuated the creeds of hatred, prejudice, greed, intimidation, domination, and unreason from generation to generation..them. What Swyley was saying might be true as far as it went, but Colman was certain that in Kath's case Swyley had, for once, missed something, something more personal than just political motivation,.Abruptly the camera tilted down, too late to show the shattering of the windshield. That's old Sinsemilla at the peak of her motherly concern. But she says."That's right. I don't own a gun." Geneva's sudden smile was more radiant than the candlelight. "Now.Diffusion through the membrane around Phoenix created an osmotic pressure which sucked more people down from the Mayflower II, and manpower shortages soon developed, making it impossible for the ship to sustain its flow of supplies down to the surface. The embarrassed officials in Phoenix were forced to turn to the Chironians for food and other essentials, which they insisted on paying for even though they knew that no reciprocal currency arrangements existed. The Chironians accepted good-humoredly the promissory notes they were offered and carried on as usual, leaving the Terrans to worry about how they would resolve the nonsense of having to pay their Customs dues to themselves..Bernard grinned. "It takes some getting used to, doesn't it? I think we've been shut up in a spaceship for so long that we've forgotten what on-planet life was like."..Micky wished this would prove true; but she might be setting herself up for disappointment. Faith in the.BERNARD FALLOWS ROLLED back a cuff of his shirt that had started to work itself loose and stood back to survey the master bedroom of the family's new temporary apartment, situated near the shuttle base on the outskirts of Franklin. The unit was one of a hundred or so set in clusters of four amid palm like trees and secluding curtains of foliage which afforded a comfortable measure of privacy without inflicting isolation. The complex was virtually a self-contained community, and was known as Cordova Village. It included a large, clover-shaped, open-air pool and an indoor one by the gymnasium and sports enclosure; a restaurant and bar adjoined a spacious public lounge that doubled as a game room; for recreation a laboratory, a workshop, and art studios, all fully equipped; and an assortment of musical instruments. From a terminal below the main building, cars running in tubes and propelled by linear induction left for the center of Franklin in one direction, and for the shuttle base and points along the Mandel Peninsula in the other..It's not real life. There isn't anything like that in real life." "Who cares? It's more fun. Why be a drag?""Two of your officers are heading this way. I thought you ought to know."."You can't control me with a name!".At once their faces split into broad smiles, and they walked over. The redhead shook his hand warmly. "I see you've already met Wellington. I'm Shirley. This is my daughter, Ci."..Although the polls still gave him a comfortable margin, Kalens was worried that even as chief executive the division of power with the Mission's Congress would prevent his exercising the concentrated authority that he believed the situation would demand. Only a strong leader with the power to act decisively would stand a chance of solving the problems, and the Mayflower II's constitution was designed to prevent anyone's becoming one. Its

spirit was an anachronism inherited from antiquity when a newly rounded Federation had sought to guard itself against a renewed colonialism, and the governing system embodied that spirit quite effectively. That was the problem. "Oh, is that what it is? I never realized. You never told me you were with a special unit." "To your approval, I trust," he said. Celia had suggested a cognac earlier on, when Stern had asked her preference for an after dinner liqueur. Leilani was clearly unbreakable. Little snort, Jay thought to himself and turned the page. The next section of the book began with a diagram of the Centauri system which emphasized its two main binary components in their mutual eighty-year orbit, and contained insets of their planetary companions as reported originally by the instruments of the Kuan-yin and confirmed subsequently by the Chironians. Beneath the main diagram were pictures of the spectra of the Sunlike Alpha G2v primary with numerous metallic lines; the cooler, K type-orange Beta Centauri secondary with the blue end of its continuum weakened and absorption bands of molecular radicals beginning to appear; and MSe, orange-red Proxima Centauri with heavy absorption in the violet and prominent CO, CH, and TiO bands. "Gone forward to the outer lock." "Really? Who?" Colman asked. "Not you," she disagreed, as though she knew him well. "Anger's more like it." Suddenly a man enters the bathroom from the front of the motor home. Yesterday in the backyard, when Micky admonished the girl not to invent unkind stories about her ornate hand-tooled designs that, to the boy's questioning fingertips, speak of parades, horse shows, and. "He did. She's got a place in the city--just across from the base." Curtis slides a pane open. Wind blusters like restless bears at the bars of a cage, but this is a mild one. This apparently had been an exotic treat to the dog, as well. When first given a chip, he turned the "A hundred." Three obstacles now remained between Kalens and the vision that he had nurtured through the years of presiding over the kind of neofeudal order that would epitomize his ideal social model. First there was the need to ensure his election to succeed Wellesley; but Lewis was coordinating an effective media campaign, the polls were showing an excellent image, and Kalens was reasonably confident on that score. Second was the question of the Chironians. Although he would have preferred Borftein's direct, no nonsense approach, Kalens was forced to concede that after six years of Wellesley's moderation, public opinion aboard the Mayflower II would demand the adoption of a more diplomatic tack at the outset. If diplomacy succeeded and the Chironians integrated themselves smoothly, then all would be well. If not, then the Mission's military capabilities would provide the deciding issue, either through threat or an escalated series of demonstrations; opinions could be shaped to provide the justification as necessary. Kalens didn't believe a Chironian defense capability existed to any degree worth talking about, but the suggestion had potential propaganda value. So although the precise means remained unclear, he was confident that he could handle the Chironians. Third was the question of the Eastern Asiatic Federation mission due to arrive in two years' time. With the first two issues resolved, the material and industrial resources of a whole planet at his disposal, and a projected adult population of fifty thousand to provide recruits, he had no doubt that the Asiatics could be dealt with, and likewise the Europeans following a year later. And then he would be free to sever Chiron's ties to Earth completely. He hadn't confided that, part of the dream to anyone, not even Celia. "Love. I thought you would say love is the answer." Her sweet gamine face wasn't designed for ironic powder into the wounds with a small syringelike applicator. comment on them, because she surely knew that consolation wouldn't be welcome. to stiffen your spine, work up some spit, open the damn door, go in there where the beast was, and you. Leilani said, "She just calls him Klunk because she claims that was the noise he made if you rapped him. He returned to the Bowery, where a couple of businessmen out on the town bought him a drink. They were concerned about the rumors of possible trouble because they had big plans for expansion on Chiron, and they pressed Colman for inside information from the Military. Colman ' ~d he didn't have any. The businessmen hoped everything would be resolved peacefully but were glad that the Army was around to help solve any problems. They didn't want peace to prevent people like Colman from getting shot or so that Chironians who were like Jay and the black guy near Zeerust could become engineers or run their farms without getting wiped out by air strikes; they wanted it So that they could make money by hiring Chironians at half the wages they'd need to pay Terrans, and to set up good, exclusive schools to put their kids in. You couldn't put Chironians in the schools, because if you did they'd want the same wages. And in any case they'd never be able to afford it. The Chironians weren't really people, after all. All entrances into the Center itself were guarded. Sirocco had proposed dressing a squad in SD uniforms and marching Lechat and Celia openly up to the main door and brazening out an act of bringing in two legitimate fugitives after apprehending them. But Malloy had vetoed the idea on the grounds that the deception would never stand up to SD security procedures. Then Lechat had suggested a less dramatic and less risky method. As a regular customer of the Fran?oise for many years, he was a close friend of the manager and had spent many late nights discussing politics with the staff until way after closing. They all knew Lechat, and he was sure he could rely on them. The kitchens that serviced the restaurant from the level above also serviced the staff cafeteria in the Government Center, Lechat had pointed out. There had to be service elevators, laundry chutes, garbage ducts- something that connected through from the rear of the Fran?oise. "You're the first Terran we've talked to," Shirley said. She nodded her head to indicate the direction they had come from. "We've got a class of kids back there who are bubbling over with curiosity. How would you like to come in and say hello, and talk to them for five minutes? They'd love it."
